COVID Vaccine Communications
Resources for Pediatricians

Communicating with families about the COVID-19 vaccine

Healthcare providers and workers remain a trusted voice for parents and families when it comes to the COVID vaccine. You can help your families understand why getting the vaccine is the best choice for their health. Here are some tools and resources to help talk to parents and guardians about getting their children vaccinated.

Strategies

I. COVID-19 Protect | Me You Us Community Initiative – Behavioral Health and Wellness Program - These videos demonstrate how motivational interviewing can help answer parent’s questions and get kids vaccinated.

II. Be empathetic: Do your best to understand the families’ and kid’s concerns. Make sure the families you see feel heard.

III. Solicit questions: Make sure families feel comfortable asking questions, and that they ask them.

IV. Explain: Provide information about the importance of the COVID-19 vaccine, while making sure you are clear and concise.

V. Shared decision making: Equip the family with the knowledge they need to make an informed decision, but leave the decision up to them.

VI. Be personal: Give your recommendation. Explain to families why the vaccine is important for their family specifically.

Answering questions

I. CDC curated resource for communicating with families and caregivers about the COVID vaccine.

II. All about the COVID-19 Vaccine for Children and Teens - information about who is eligible for the vaccine, and why it is important to get children vaccinated.
Shareable materials

Social Media
Below are template campaigns and promotional materials that can be shared via social media, or used as print material.

I. Pfizer 5-11 Authorization Templates

II. Vaccine Makes Your Kid Stronger Template

III. Protect Your Child From Hospitalization Template

IV. Vaccine Keeps Children in School Template

V. COVID Vaccine for Children 5-11
   - The FDA and CDC recommend children 5 through 11 get Pfizer vaccines
   - The vaccine was found to be 90.7% effective in preventing COVID-19 for kids
   - 4,600 children participated in the study with no serious side effects

VI. The Public Health Communications Collaborative provides graphics and sample social media posts.

VII. American Academy of Pediatricians - a checklist for parents to help them get ready for the COVID-19 vaccine
